StormCloud

Architecture Overview

A music streaming web app with search, playlists, favorites,
karaoke mode and a Premium tier.

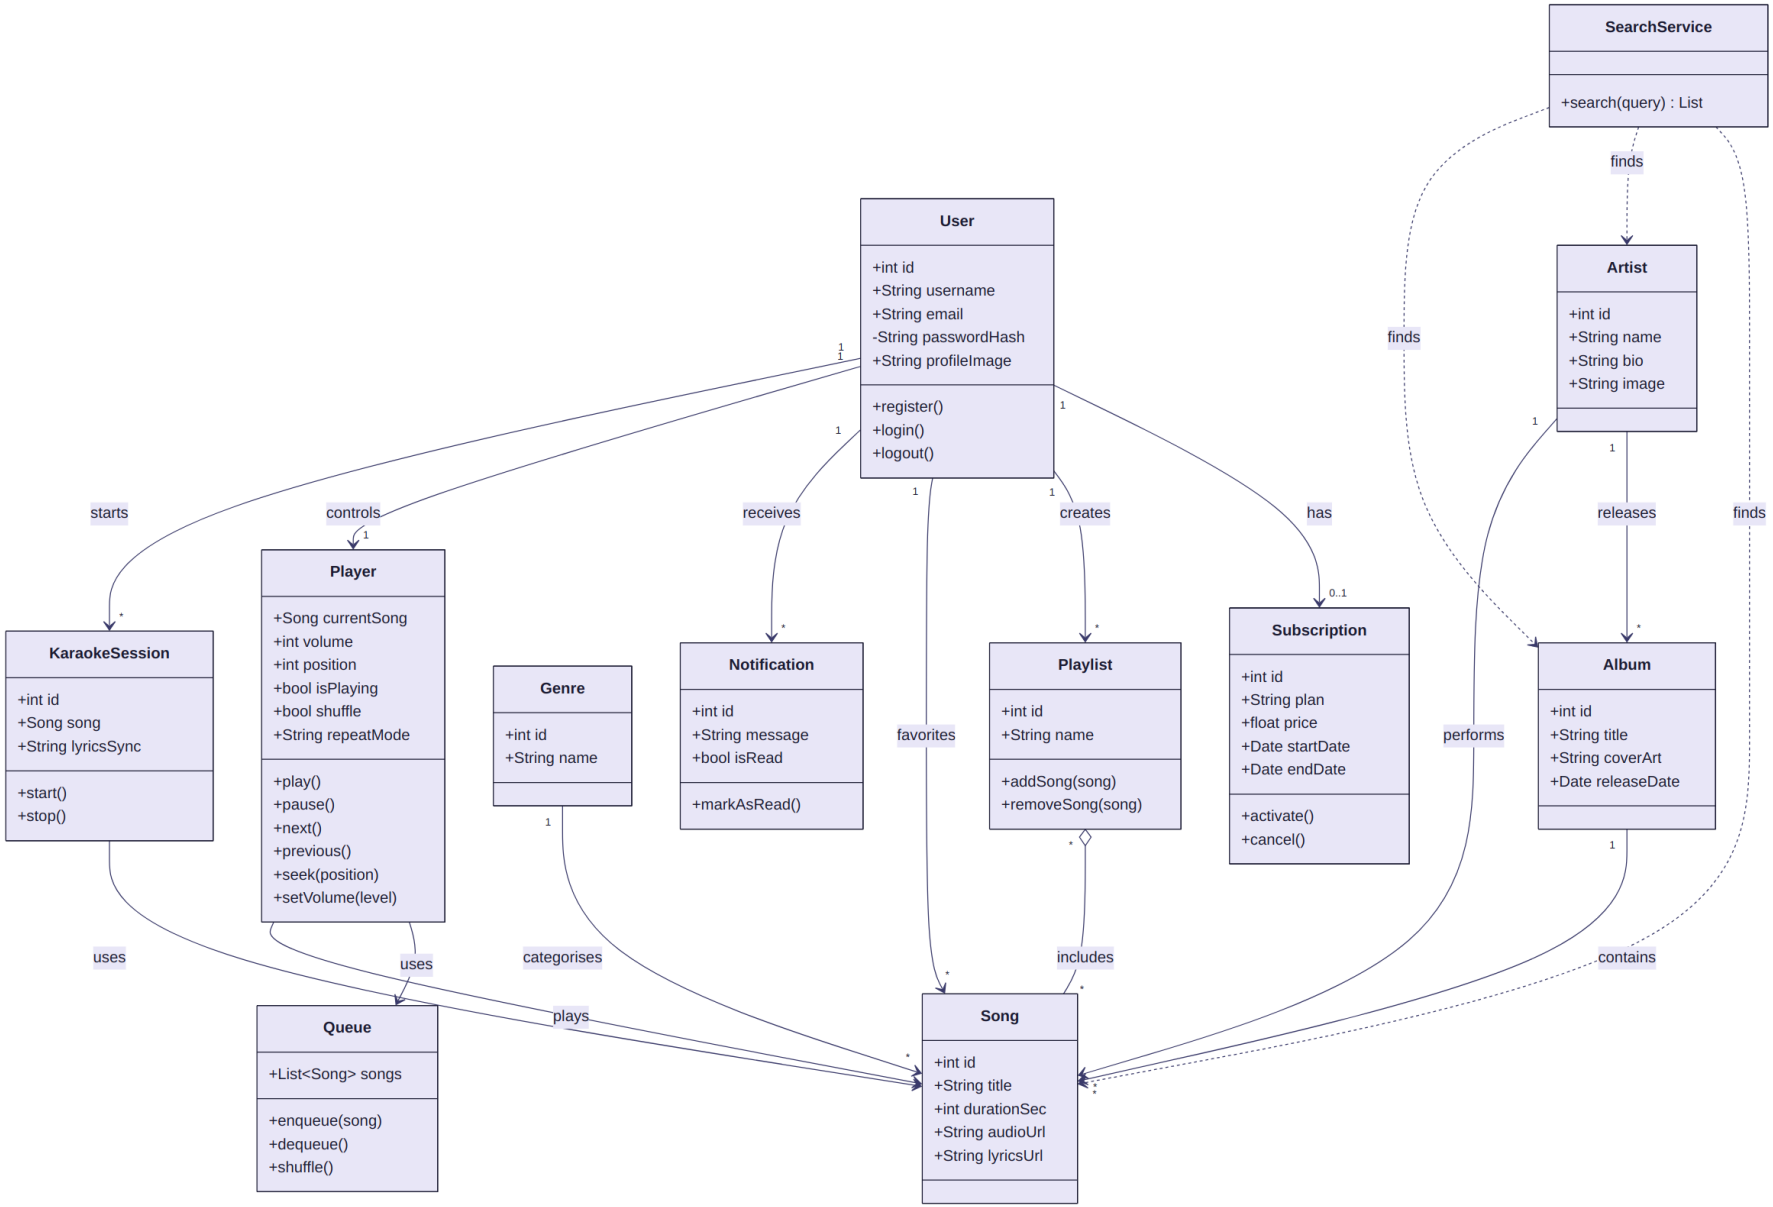

Contents

1. Class diagram - the application's objects and their relationships
2. ER diagram - the proposed database schema
3. Workflow - how a user moves through the app

Note: StormCloud is currently a front-end prototype (HTML + CSS).
These diagrams describe the intended architecture.

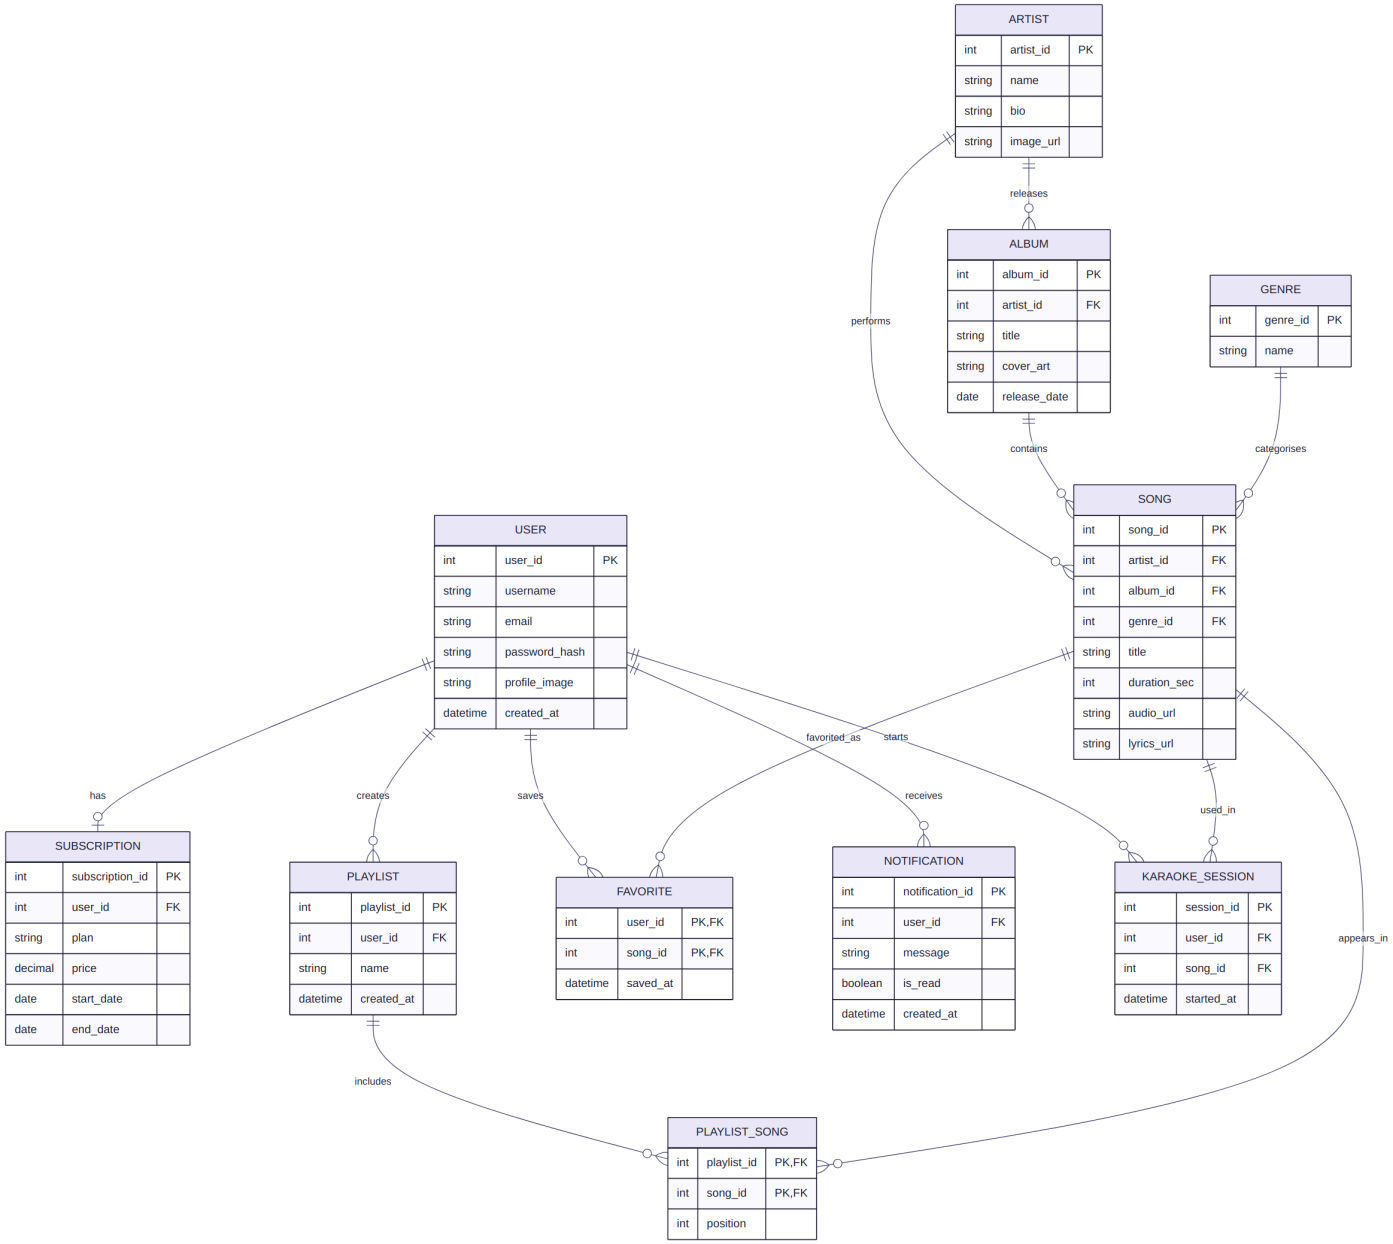

1. Class Diagram

Core domain objects. A User controls a Player, owns Playlists and Favorites, and may hold one Subscription. Artists release Albums, which contain Songs; Songs belong to a Genre.

2. ER Diagram

Proposed relational schema. PLAYLIST_SONG and FAVORITE are join tables resolving many-to-many relationships between users, playlists and songs.

3. Workflow

User journey from first visit to playback. Premium users get ad-free, high-quality audio and downloads.
